What is computer vision?
What is computer vision?
Computer vision is a field of artificial intelligence (AI) that uses machine learning and neural networks to teach computers and systems to derive meaningful information from digital images, videos and other visual inputs—and to make recommendations or take actions when they see defects or issues.

Intelligent vision systems are computer-based technologies that use advanced algorithms and machine learning to extract and interpret visual data in real-time. These systems can recognize and identify objects, patterns, and environments, and can make decisions based on that information to assist in various tasks. They are an essential component of many modern technologies, including self-driving cars, robotics, and industrial automation.

Driving on roads with potholes can be a frustrating and a dangerous experience for drivers, especially those who frequently drive on poorly maintained roads. Potholes can cause damage to vehicles, create bumpy and uncomfortable rides, and even cause accidents. This is why we focused on developing amehlo.
amehlo.ai is an intelligent vision system that gathers, aggregates, and analyses the environment in real time providing rich data for smart cities, safer roads, predictive maintenance, and infrastructure planning. Using optical and radar data together with AI and machine vision, amehlo.ai collects all environmental data, including road markings, road conditions, traffic signs, buildings, people, and other vehicles on the road.

SolVision | AI Vision System | Ind
solomon-3d.com/solomon-vision/
SOLOMON
Vision with Intelligence
SolVision Product Description
Pricing
SolVision AI vision software optimizes inspections with Solomon's unique rapid AI model training for superior defect detection, item classification, optical character recognition, and presence/absence checks.
Contact
Our solution reduces inspection time and boosts accuracy compared to manual and less advanced systems, ensuring manufacturers meet high-quality standards. SolVision seamlessly integrates with several industrial cameras and includes built-in PLC communications via TCP/IP and Modbus protocols at no extra cost.
Ideal for manufacturing, food & beverage, textiles, electronics, and more, SolVision's advanced features cater to diverse industry needs, guaranteeing accuracy and high quality.

The 100 Most Popular Computer Vision Applications in 2024

Một số chủ đề nghiên cứu

CVPR 2024

https://cvpr.thecvf.com/Conferences/2024/CallForPapers

CVPR 2024

June 17-21, 2024, Seattle, USA

The Thirty-Fourth IEEE/CVF Conference on Computer Vision and Pattern Recognition

Main conference website: https://cvpr.thecvf.com/Conferences/2024

Call for Papers

Papers in the main technical program must describe high-quality, original research. Topics of interest include all aspects of computer vision and pattern recognition including, but not limited to:

CVPR 2024

https://cvpr.thecvf.com/Conferences/2024/CallForPapers

- 3D from multi-view and sensors
- 3D from single images
- Adversarial attack and defense
- Autonomous driving
- Biometrics
- Computational imaging
- Computer vision for social good
- Computer vision theory
- Datasets and evaluation
- Deep learning architectures and techniques
- Document analysis and understanding
- Efficient and scalable vision
- Embodied vision: Active agents, simulation
- Explainable computer vision
- Humans: Face, body, pose, gesture,
- movement
- Image and video synthesis and generation
- Low-level vision
- Machine learning (other than deep learning)
- Medical and biological vision, cell microscopy
- Multimodal learning

- Optimization methods (other than deep
- learning)
- Photogrammetry and remote sensing
- Physics-based vision and shape-from-X
- Recognition: Categorization, detection,
- retrieval
- Representation learning
- Robotics
- Scene analysis and understanding
- Segmentation, grouping and shape analysis
- Self-& semi-& meta-& unsupervised learning
- Transfer/ low-shot/ continual/ long-tail
- learning
- Transparency, fairness, accountability, privacy
- and ethics in vision
- Video: Action and event understanding
- Video: Low-level analysis, motion, and
- tracking
- Vision + graphics
- Vision, language, and reasoning
- Vision applications and systems

ICCV 2023

https://iccv2023.thecvf.com/call.for.papers-361400-2-22-14.php

The ICCV 2023 submission guidelines were constructed in reference to recent computer vision conferences, in particular, the latest CVPR 2023. While ICCV 2023 seeks to carry over most guidelines to be consistent, there are some differences. Please read our rules carefully.

Papers in the main technical program must describe high-quality, original research. Topics of interest include the following aspects of computer vision and pattern recognition:

ICCV 2023

https://iccv2023.thecvf.com/

- 3D from a single image and shape-from-x
- 3D from multi-view and sensors
- 3D shape modeling and processing
- Action and event understanding
- Adversarial attack and defense
- Biometrics
- Computational imaging
- Computer vision theory
- Datasets and evaluation
- Deep learning architectures
- Document analysis and understanding
- Efficient and scalable vision
- Embodied vision: Active agents; simulation
- Explainable AI for CV
- Faces and gestures
- Fairness, privacy, ethics, social-good, transparency, accountability in vision
- First person (egocentric) vision
- Geometric deep learning
- Human-in-the-loop computer vision
- Human pose/shape estimation
- Image and video forensics
- Image and video synthesis
- Low-level and physics-based vision
- Machine learning (other than deep learning)
- Medical and biological vision; cell microscopy
- Motion estimation, matching and tracking
- Multimodal learning
- Navigation and autonomous driving
- Neural generative models
- Object pose estimation and tracking
- Optimization methods (other than deep learning)
- Photogrammetry and remote sensing
- Recognition: Categorization
- Recognition: Detection
- Recognition: Retrieval
- Representation learning
- Scene analysis and understanding
- Segmentation, grouping and shape analysis
- Self-, semi-, meta-, unsupervised learning
- Transfer, low-shot, continual, long-tail learning
- Video analysis and understanding
- Vision and audio
- Vision and graphics
- Vision and language
- Vision and robotics
- Vision applications and systems

ECCV 2024

Call for Papers

Papers in the main technical program must describe high-quality, original research. Topics of interest include all aspects of computer vision and pattern recognition including, but not limited to:

- 3D computer vision
- Adversarial learning, attack and defense methods
- Computational photography
- Datasets and benchmarking
- Efficient and scalable vision
- Fairness, accountability, and transparency
- Generative models
- Humans: biometrics, face, body, pose, gesture, movement
- Learning: architectures, algorithms, formulations
- Learning: representations
- Learning: semi-, meta-, weakly-, unsupervised
- Learning: transfer, low-shot, continual, long-tail, reinforcement
- Low-level vision and imaging
- Medical and biological imaging
- Open source tools
- Optimization methods, model fitting, and theory
- Recognition: categorization, detection, retrieval
- Scene analysis and understanding
- Video: low-level analysis, motion, and tracking
- Video understanding
- Vision and other modalities
- Vision and robotics
- Vision applications and systems
